

DEPARTMENT OF NATURAL RESOURCES

WATER WELLSJ. A. Allan
1938-39

One hundred and ninety-six water wells were drilled or bored in accordance with the Well Drillers Act, which gave valuable information to the Department and the well owners.

All samples of cuttings submitted were examined by the Geology Branch at the University of Saskatchewan. The Department contributed towards the cost of the study of the samples and in maintaining a permanent record.

The Public Health Department also made a chemical and bacteriological examination of the waters from new and old wells, the results of which were imparted to the well owners. This service is of great importance to well owners from a public health viewpoint.
